COBUS WOP Features

- Easy operation
- Approved macro management
- Support charts
- Show and hide program periods
- AutoSaves: Security backups
- Flexible starting time
- Activate the track adjustment feature while generating the output files in order to control the radius of the inner arch
- Set roughing and finishing depths while processing
- Pocket processing including different clean out strategies
- Feed adjustment of edges and small radii
- Feed limits: On exceeding or failing of the feeds, the post processor issues a warning
- Extensive drilling macros
- 3D simulation and time calculation to avoid non-productive test runs
- Adapted optimizations as well as equipping aid for every type of machine
- Support up to the fifths axis (adjusting axis)
- Multiprogramming is no longer required
- Save expenses for interfaces
- Configuration of post processors of all machine types and controls
